SUMMARY

Designer since 1997 who now builds the systems behind design work: AI-agent pipelines, design systems on tokens, and production front ends delivered through Claude Code. Five years in airline products: booking used by 20+ airlines, a customer data platform, white-label booking and websites. I set the architecture, the structure and the checks; agents write the code. I work remotely with product and engineering teams across time zones, in English.

EXPERIENCE

Product Design Technologist — Paximizer

2023–present · paximizer.com

Customer data platform and AI products for airlines. I lead the front-end architecture in a team of five and run design and delivery through AI agents.

Paximizer CDP (in production)

- Set up a Claude Code harness of 5 agents and 13 skills: research, an HTML prototype in two variants, a choice, production code on the architecture and the design system, AI QA.
- Built the design system in code: 96 components in 3 tiers (base, domain, AI) and 1,309 Storybook stories, with no Figma in the loop.
- About half of the front end came out of my agent sessions (393 of 777 commits).
- Built a tester skill that walks every flow as a real client, role by role: in the last comparison it caught 70% of what a human tester found, and the human missed 80% of what it found.

NewSky, a booking engine for any airline (solo, in progress)

- Built solo with a harness of 5 agents and 32 skills; 1,368 tests.
- One contract for any airline backend: the front end checks 28 capabilities and hides what the backend cannot serve.
- An admin with per-airline component variants; an airline's whole style is one JSON file, so a new airline is styled in a day.
- Designing the next step: a front end that adapts to each passenger, composed from Paximizer CDP advice.

PAX Pitch, a presentation and content studio

- Weekly topic research, a two-week content plan, decks with 65 slide types, narration and video, approvals in Telegram and cross-posting to paximizer.com (358 of 369 commits).

PAX-KB, a knowledge base for AI agents

- Documented the legacy front end and back end, indexed 10,005 fragments into a RAG and built an MCP server with 8 tools for 27 agents.

paximizer.com

- Moved the marketing site from Webflow to Astro and kept all 91 legacy URLs.

Lead Product Designer — WebSkyTech

2021–2023 · websky.tech

Booking and customer-data products for airlines, designed in Figma.

- WX booking engine: search, fares, seats, ancillaries and payment within airline constraints (PNR, SSR, fare rules, baggage); booking products used by 20+ airlines.
- Moved brand customization from manual restyling to tokenized multi-brand theming; 400+ customizable components.
- A redesigned booking flow showed +5% conversion in an A/B test (preliminary).
- White-label airline website: 20+ wireframe screens tested, semantic tokens with light and dark themes, a component library with variants and a page constructor; 26 screens across 4 breakpoints.

- Customer data platform (CDP v1): designed on real API models and taken from MVP to production: profiles, loyalty, campaigns, support, monitoring.

Lead Web Designer — Cloudlessons / freelance

2010–2021

- Led design for education platforms with millions of monthly visits: product UI, dashboards, personal accounts, landing pages and email marketing.

Graphic Designer — Freelance and agencies

1997–2010

- Print and web for ad agencies, TV and radio companies and printing houses: branding, outdoor, layout and typography.

PROJECTS

Wind2Ride

A route planner for cyclists that reads the wind. Solo product, 2025 to present. · wind2ride.app

- Took it from idea to the App Store and Google Play alone: research, design, an AI-assisted build, beta tests with in-app reports, releases.
- 600+ riders, 10 API integrations, 415+ commits, 9 releases; clubs and group rides.

Tools and open source

Skills, plugins and extensions built for real, repeated work. · github.com/ikstro

- Muse: a Claude Code skill that finds a design direction and builds it within the design system; open source; designed this site.
- Language Tutor: a Claude Code plugin and VS Code panel that turns coding sessions into language lessons; open source.
- Chameleon and Follow the Path: Figma plugins on Figma Community. claude-commit: a VS Code extension.

SKILLS

Hard skills

- **AI agents & harnesses:** Claude Code harnesses: agents, skills, hooks, MCP servers, RAG.
- **Front end with AI agents:** I set the architecture, the structure and the checks; agents write the code (Vue, React Native, Astro, TypeScript).
- **Product design:** UX/UI, information architecture, data-heavy enterprise interfaces, booking flows, composition, typography.
- **Design systems:** Design tokens, semantic theming, multi-brand and white-label systems, component libraries, Storybook.
- **Design tools:** Figma, Token Studio, Photoshop, Illustrator, InDesign.
- **Automation & work tracking:** Workflows, tasks and time: from self-built databases to Notion and trackers.

Soft skills

- **Talking to AI:** Briefs with context and constraints that get the result in a few turns.
- **Knowing what not to hand to AI:** AI where it pays off; a ready-made engine, a script or a drawing where it doesn't; animation only where it explains something.
- **Owning the problem:** From the first question to the shipped thing; remote, across time zones, in English.
